

HOW TO INTERPRET THE FMNY BMAP

Connect to the following web address: [Online FMNY BMAP](#)

This page will appear:

When the link is opened you will see this page. The assets that have been risk assessed appear as different coloured points, lines and shapes. Assets within the Safer Settlement have not been included.

The colours indicate the risk assessment outcome:

	Extreme
	Very High
	High
	Medium
	Low
	N/A – no risk or still to be assessed

Polygons/Shapes indicate the asset type:

	Polygon = Human Settlement Residential
	Diamond = Human Settlement – Special Fire Protection/Other
	Square = Economic Asset
	Circle = Cultural Heritage Asset

Use your mouse to navigate the map.

Zoom in and click on an Asset. The Information Window will open:

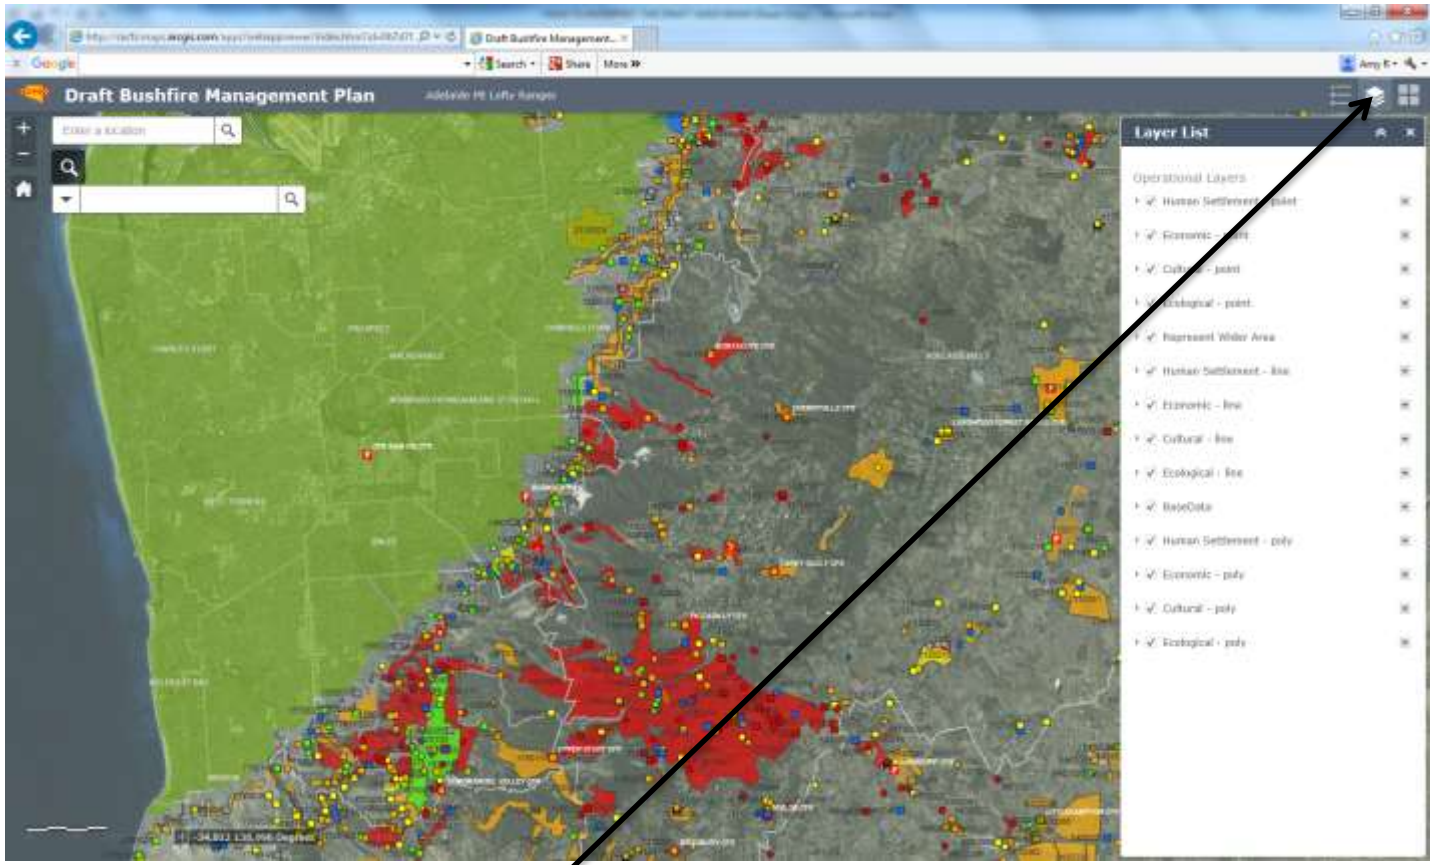

Likelihood = likelihood of fire igniting, establishing and spreading to the asset.

Consequence = applied only to the asset itself, i.e.; “what will happen to the asset if it is impacted by a bushfire?” For example, will it burn down, will it cease to function, will people be injured etc.?

Risk Rating = ranges from no risk to extreme and is a result of combining likelihood factors with consequence factors.

Asset type and location is also listed, along with any assigned treatments and the agencies responsible for those treatments.

The different classes of assets can be turned on and off by selecting the layer list and either ticking or unticking the box relating to the asset. The BaseData layer contains additional information (CFS stations, Bushfire Safer Places etc.) that can also be turned on/off.
